

Best Work Reflective Essay

The piece of work I have chosen is a project from my Auto Mechanics class during the first semester of my senior year. The objective of the project was to create something that represented possible careers in the automotive industry and the requirements of these careers. Although the project was a group effort, I truly believe this is my best work. I have chosen this as my best work because lots of effort was put into this, and it relates to my future career goals.

When composing the project with my partner, we came up with multiple ideas for the layout of the project. The decision was to focus mostly on what it takes to be an auto mechanic, and the steps to get there. Our project was made up of three parts, high school education, college, and finding the right pathway for career readiness. The project has overall affected my outlook on my future career being a designer and mechanic of automobiles. What we should have included was the possible tie into the environment and the automotive industry. The automotive industry is accountable for the environmental impacts on our Earth.

This assignment exemplifies me as a student because it shows how far I've come and strived to complete the assignment, showing my dedication towards achieving my goal. Based on my grade in this academic assignment I proved that I attained my goal of understanding the meaning of career readiness and that there's always room for improvement during any circumstance.
